

MIDHUN DAS N K

midhundas3110@gmail.com | +91-9207083110 | Kerala, India | [midhun04](#)

TECHNICAL SKILLS

- **Frontend Technologies:** JavaScript, TypeScript, React.js, Next.js, React Native, HTML5, CSS3, Tailwind CSS
- **Backend Technologies:** Python, Django, .NET, JavaScript, TypeScript, Node.js, Express.js, GraphQL, REST APIs
- **Databases:** MySQL, PostgreSQL, MongoDB, RDBMS, NoSQL
- **Tools:** Git, Github, Postman, Docker

EXPERIENCE

Full Stack Developer | Wecypher Creative Consultants

(March 2025 – Present)

- Working on multiple live projects using React.js, Next.js and other web technologies.
- Developing and maintaining REST APIs, databases, and back-end logic.
- Collaborating closely with front-end developers, designers, and project managers.
- Ensuring the timely delivery of features, updates, and enhancements.

PROJECTS

PEEDI – Multi-tenant WhatsApp commerce and automation platform *Built with Next.js, Tailwind CSS, Node.js, GraphQL, Prisma, TypeScript, PostgreSQL*

Store App

- A comprehensive WhatsApp-based e-commerce platform enabling businesses to create and manage their online stores directly through WhatsApp.
- Developed a full-cycle retail engine allowing merchants to sync their product catalogs with WhatsApp, enabling customers to browse, add to cart, and checkout within a chat session.
- **End-to-End Order Management:** Built a comprehensive merchant dashboard to manage the entire order lifecycle—from initial inquiry and payment verification to delivery partner assignment and final fulfillment tracking.

Booking & Appointments App

- **Smart Scheduling Engine:** Engineered a complex booking system that manages staff availability, service durations, and time-slot validation to prevent overbooking and scheduling conflicts.
- **Seamless Calendar Sync:** Integrated **Google Calendar OAuth** to allow businesses to sync their professional schedules automatically, providing a unified view of all WhatsApp-booked appointments.
- **Automated Chat Bookings:** Designed a "step-based" server-side flow that guides customers through a booking process via WhatsApp.

Flow Builder App

- **Drag-and-Drop Automation:** Shipped a custom visual flow builder that enables non-technical users to create branching conversation trees, interactive menus, and automated responses using a node-based interface.
- **Lead & Team Management:** Developed a CRM layer to capture customer leads from WhatsApp, featuring Kanban-style boards for sales pipelines and automated routing to specific team members.
- **Marketing Campaigns:** Built a templated outreach tool that allows businesses to send bulk WhatsApp campaigns to specific customer segments based on their purchase history or lead status.

LLYK - Global Campaign & Rewards Platform *Built with Next.js, Node.js, GraphQL, Prisma, TypeScript, PostgreSQL*

- Built a complete "rewards-as-a-service" platform where businesses launch marketing campaigns and users earn digital credits for completing specific tasks (like social media engagement or app signups).
- **Three-App Ecosystem:** Developed a unified system that powers three separate interfaces: a **Merchant Portal** to create campaigns, a **Participant App** to discover tasks, and an **Admin Dashboard** for internal staff.
- **Digital Wallet & Credit System:** Engineered a high-accuracy digital ledger to track user earnings, credit redemptions, and business funding, ensuring all financial transactions are secure and transparent.
- **Smart Task Verification:** Integrated **image processing and OCR (text recognition) tools** to automatically verify "proof of work" (e.g., checking a screenshot) before a user is rewarded with credits.
- **Payment Integration:** Connected **Razorpay** to handle secure business payments for purchasing campaign credits and managed the automated payout process for users redeeming their rewards.
- **Fraud Prevention & Security:** Built internal "trust tools" for the support team to monitor suspicious activity, audit manual verification requests, and manage secure coupon redemptions.

OTT Platform | *Built with React.js, Next.js, Tailwind CSS, Prisma, Mongo DB*

- OTT Platform is a comprehensive streaming platform providing users access to an extensive multimedia library featuring movies, TV shows, videos and documentaries.
- **Frontend Development:** Built a responsive and visually appealing user interface using React.js with Tailwind CSS to ensuring seamless navigation and optimal viewing experience across devices.
- **Content Management System:** Implemented dynamic multimedia listing pages with filtering, search functionality, and categorization to help users discover content efficiently.
- **User Experience Features:** Designed and developed detailed content pages with rich media previews, synopsis, cast information, and related content recommendations.
- **Personalization Features:** Developed user profile management, personalized watchlists, content preferences and interests tracking.
- **Review & Rating Feature:** Integrated user review and rating system, enabling better content feedback mechanisms.
